

Implementing a project portal for an integrated project management system based on SharePoint

Sector:	Oil and gas
Region:	Russia
Client:	LUKOIL
Task:	<ol style="list-style-type: none">1. Develop a portal based on MS SharePoint to host IPMS information.2. Provide access to the portal for all project activity stakeholders in LUKOIL.3. Ensure secure access to information.4. Ensure fast operation of the system, particularly when downloading or opening big files or watching video files.
Result:	The portal of the integrated project management system provides IPMS information to all LUKOIL staff and contractors involved in any project. The portal contains project information, key learnings, terms and definitions, training materials for project management, Project Viewer news bulletins, etc.
