

Samsung Engineering recommends ITPS as a system integrator for manufacturing companies

- Sector:** Oil and gas
- Client:** Samsung Engineering
- Task:** ITPS Mid East provided Samsung Engineering services related to building telecom and protection systems as part of an oil field infrastructure construction project in Iraq. The project was implemented in steps from 2013 to 2017.
- Result:** As part of the project, ITPS successfully carried out the design, supply and installation of equipment as well as commissioning of the following systems:
- TETRA trunked communication
 - Telephone communication
 - Wireless data transmission
 - Alarm and dispatch communication
 - Security and video monitoring
 - Intrusion detection
 - Access control
 - Video conferencing
 - Digital clock systems
 - Cabling structuring
 - Entertainment TV
 - Weather systems
- Review:** *"The work was completed within the specified timeframe and in full compliance with the highest industry standards. Based on the results of their work, we consider the ITPS team highly competent and would recommend the company as a system integrator for industrial facilities. We appreciate your excellent work and commitment and hope to work with them in future."*
