

Customization and support of an automated manufacturing execution system for KarakudukMunai, LLP

Sector:	Oil and gas
Region:	Kazakhstan
Client:	KarakudukMunai LLP
Result:	<p>The support services provided for the automated manufacturing execution system enabled KarakudukMunai to increase production management efficiency through the streamlined application of MES. In addition, user support and regular analytical reports for performance of all MES modules helped to increase both quality and efficiency in the resolution of production issues. This helped to facilitate effective managerial decision-making based on operational analysis of key production processes.</p>
Partners:	Tieto, OSISOFT
Review:	<p>“Parma-Telecom LLC specialists are highly skilled and equipped with the know-how and competencies for providing services and solving issues at all project stages. They boast a wealth of expertise, excellent problem-solving abilities, and were able to foster effective collaboration with Customer employees. All this made it possible to get a high-quality result which facilitated the daily routine of the company's specialists when operating software and hardware for automated control systems in order to better manage production and effectively extrapolate and optimize results.</p> <p>A joint, coordinated efforts from the support team allowed for timely implementation of this project to a high standard, making it an exemplary case study for the deployment of similar projects in other oil and gas companies.”</p> <p>Deputy Director General for Operations, K. Sharapov.</p>
