Implementing a consolidated project reporting system for large capital projects at West Qurna-2 based on Oracle Primavera Analytics and SAP BI

Sector: Oil and gas

Region: Iraq

Client: LUKOIL

Task:

- Add functionality for data documentation and collection during implementation of company projects.
- Add functionality for generating regulatory and analytical reports for managerial decision-making

Result:

The project enabled the customer to achieve the following results:

- Development of procedures for capital project reporting
- Typification of report forms for capital projects
- Automation of regulatory and analytical reporting processes
- Creation of sets of reports for managerial decision-making
- Definition of responsibilities for centralized project report management

This enabled the customer to document and unify project reporting requirements, while taking into account the needs of project teams, functional units and corporate management and keeping them updated as the company implements its capital projects.

The solution makes it easier for users to generate project reports, while reducing man-hours and increasing the transparency of the reporting procedure.

Partners: SAP, Oracle
